## Luxtel Timer Accessories

Luxtel offers two types of standard timers for use with lamp modules and OEM equipment.

The first type is a PCB with a photocell/detector. It mounts to the front of the Luxtel lamp housing as well as many other system housings. The photocell side of the PCB should always be exposed to the lamp's output. It mounts using two 4-40 screws. Luxtel part# 1167.

PCB timer shown installed on a typical Luxtel lamp module housing. Note that the photocell side is up.

The second timer is a two pin plug-in timer. It is commonly referred to as a TM2 timer. It gets this name from the original manufacturer, which no longer produces it. It is used on many well known endoscope systems, especially those made by Olympus. Luxtel part# 1038.
